Recognition in DFAs

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**  
↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**  
    ↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**  
          ↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**  
          ↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 1011

**1 0 1 1**

Input fully processed and DFA is in a final state  $\Rightarrow$  **ACCEPT!**

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 10

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 10

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 10

**1 0**  
↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 11

**1 0**  
    ↑

# DFA – Recognizer of the binary strings that contain the substring 01

► Input: 11

**1 0**

Input fully processed and DFA is not in a final state  $\Rightarrow$  REJECT
